Engineering Operations Handbook - Page 1

1. Deployment Cadence

Production deployments occur Monday through Thursday between 10:00 UTC and 15:00 UTC.

Deployments are strictly prohibited on Fridays, weekends, and designated public holidays.

All production releases require passing automated end-to-end tests and approval from two senior enginee

## 2. On-Call Rotation Schedules

Primary on-call shifts rotate weekly on Tuesdays at 12:00 UTC.

The primary engineer must acknowledge PagerDuty alerts within 15 minutes for critical alerts.

If unacknowledged within 15 minutes, alerts escalate automatically to the secondary on-call engineer.

3. Incident Severity Definitions
Sev 1 (Critical Outage): Core customer-facing services down for >5% of users. Resolution target is under 6
Sev 2 (Major Degradation): High-impact latency or loss of non-essential features. Resolution target is unde
Sev 3 (Minor Defect): Workarounds exist. Fix scheduled in next sprint.
Sev 4 (Cosmetic Issue): Minor UI glitch with zero data loss.

4. Staging and Production Credentials Policy
All engineers must use hardware security keys (YubiKey) with WebAuthn for infrastructure access.
Production database access is strictly forbidden from personal local environments.
AWS staging credentials expire after 8 hours and require mandatory multi-factor authentication.
